Imprivata Privileged Access Management

Protect your most critical accounts with a comprehensive, simple privileged access management solution

Privileged access management (PAM) is crucial to improving an organization's security posture and implementing an effective Zero Trust approach. Stolen or misused credentials associated with privileged and shared accounts, poor authentication, and/or lack of control over privileged access can lead to devastating security breaches – putting your business and most sensitive information at risk. In fact, reports show that more than 70% of data breaches involve compromised or otherwise abused privileged credentials.

A key component to addressing this security risk and securing your organization's most privileged users, credentials, and assets is PAM.

Meet your security initiatives with visibility and control over privileged credentials and provide least privilege access to your most critical assets and information – all without impacting productivity.

Don't compromise on security or efficiency with key features in Imprivata Privileged Access Management:

- **Zero Trust, just-in-time access to privileged accounts** Limit the attack surface by providing least-privilege, just-in-time access, ensuring only authorized users have access to the privileged accounts they need, only when they need it

- **Comprehensive password vault and management** Secure and streamline privileged password discovery, management, and rotation with automated workflows, and provide access to managed systems without disclosing credentials to end users

Imprivata Privileged Access Management is a comprehensive, easy-to-use solution that includes:

- An enterprise password vault to securely store credentials

- A robust job engine to rotate passwords and discover privileged accounts

- A session manager to broker and monitor access to-and-from privileged systems and records

- **Enforced multifactor authentication** Verify users are authorized with enforced multifactor authentication, either through seamless integration with Imprivata Enterprise Access Management (formerly Imprivata OneSign and Imprivata Confirm ID) or other industry solutions

- **Application-to-application password management** Eliminate hard-coded or embedded application credentials through a token-based API interface with unlimited Password Caches for scalability and redundancy

- **Session management and recording** Isolate, monitor, record, and audit privileged access sessions, commands, and actions in real time for total visibility into activity

- **Regulatory and cyber insurance requirements** Satisfy compliance and security requirements like GDPR, NIST, ISO 27001, HIPAA, PCI, and SOX, and avoid failing audits with comprehensive session management and detailed audit trails

- **Leverage the Imprivata digital identity platform** Take advantage of out-of-the-box integrations with Imprivata single sign-on, multifactor authentication, identity governance and administration, and vendor privileged access management (VPAM) solutions – all from a single vendor

- **Experience a higher ROI and lower total cost of ownership**
Imprivata Privileged Access Management is a light-weight solution with a modern architecture that is agentless with zero client and server footprint, allowing organizations to download and deploy the software in just minutes and easily manage on an ongoing basis

"We chose the Imprivata Privileged Access Management solution over CyberArk because of its strength in credential management in a multi-tenant architecture and its auditing and reporting capabilities. It is a mature solution that easily integrates into our IT environments, processes, and our customers' workflows."

– Coretek Services

Imprivata is the digital identity company for mission- and life-critical industries, redefining how organizations solve complex workflow, security, and compliance challenges with solutions that protect critical data and applications without workflow disruption. Its platform of interoperable identity, authentication, and access management solutions enables organizations in over 45 countries to fully manage and secure all enterprise and third-party digital identities by establishing trust between people, technology, and information.
